Protection elements:

1- Develop a system that enables the robot to maintain its balance to ensure that it does not fall.

2- Putting a protrusion at the edges of the screen so that it protects the screen in the event of a fall.

3- Put a strong transparent buffer (protection) on the screen.

4- Strengthening the weake and vulnerable limbs with strong or rubber covers.

5- Putting precise sensors in the robot to avoid falls and shocks.

Suggestions for some robot work:

1- Providing the robot with a clear and powerful voice system that enables it to give instructions anywhere.

2- Make the robot answer all the questions of customers or others by linking a voice call with the employee.

3- Providing the robot with charging ports for smart devices.
